

Session Pro+ — four sessions, key opens, macros.

Four fully configurable sessions with boxes, extremes and midpoints, plus the standard key opening prices and the five macro windows — each one independently switchable.

DRAFT

This guide was generated from the indicator source and has not been proofread against live charts yet. Settings and defaults are accurate; the explanations may need your corrections.

Appears in TradingView as **Mosaic Session Pro+**

00 Quick start

The sessions are on, the opens and macros are off. That is the right starting point.

- 01 Check the **Timezone** first — it defaults to **America/New_York** and every window in the tool reads from it.
- 02 Adjust the four session **Time** fields to your own definitions if they differ from the defaults.
- 03 Leave **Max Past Sessions** at 1 until you want history. Each past session adds a full set of boxes and lines.
- 04 Turn on individual **ICT Key Opens** and **Macro Zones** one at a time, not all at once.

01 Global and Display

Settings that apply to every session.

Timezone America/New_York

The reference for every session, open and macro window in the tool.

Show Price on Labels off

Appends the price to session labels.

Label Size Small

Tiny through Large .

Projection (Bars) 15

How far right session levels project past the session end.

Max Past Sessions 1

How many completed sessions stay drawn. The main clutter control.

Cut Lines on Mitigation (Touch) on

Stops a level at the bar price touches it, rather than extending a line that has already been used.

Key Opens

Three reference opening prices, all off by default.

00:00 (Midnight Open) off

The midnight open, used as the daily reference in several models.

08:30 (AM News Open) off

The pre-market news release time.

09:30 (NYSE Open) off

The cash equity open.

These are single horizontal lines, not sessions. They are cheap to display — turning on all three costs three lines — and are worth enabling if you trade the New York morning.

03

Macro Zones

Five twenty-minute windows, all off by default.

WINDOW	TIME	DEFAULT
Pre-open macro	08:50 – 09:10	off
First hour macro	09:50 – 10:10	off
Late morning macro	10:50 – 11:10	off
Afternoon macro	13:50 – 14:10	off
Close macro	15:50 – 16:10	off

Each is independently toggled, so you can display only the windows you actually trade rather than all five.

04

The Four Sessions

London, NY AM, NY PM and Asia — identical controls, different defaults.

Enable

all on

Per-session master toggle.

Name

editable

The label text. Rename freely — the name is only cosmetic.

Time

session

The window, as a session string such as `0200-0500`.

Box

on

The shaded session range.

High · Low · EQ

all on

The session extremes and midpoint, each independently toggled.

Width · Style

1 · Solid

Line width 1–4 and `Solid`, `Dashed` or `Dotted`.

Alert High · Alert Low

both off

Per-session alerts when price takes that session's extreme.

SESSION	DEFAULT NAME	DEFAULT TIME
London	LDN	02:00 – 05:00
NY AM	NY AM	08:30 – 12:00
NY PM	NY PM	13:30 – 16:00
Asia	Asia	20:00 – 23:59

EVERY SESSION HAS ITS OWN ALERTS

The alert toggles are per session, not global. That means you can alert on London's high being taken during New York without getting a ping for every session extreme in the day — which is usually exactly what you want.
